Field Safety Notice: FSN-2023-09-27

Date: 2023.09.27

Product:	**MICRO FEATHER DISPOSABLE OPHTHALMIC SCALPEL WITH PLASTIC HANDLE**

Dear Customer,

This letter is to inform you of a **Field Safety Corrective Action** initiated by the manufacturer FEATHER SAFETY RAZOR CO., LTD., JAPAN for the affected **Ophthalmic Knives**.

The Competent (Regulatory) Authority of your country has been informed about this Field Safety Corrective Action.

Transmission of this Field Safety Notice

This notice needs to be passed on all those who need to be aware within your organisation or to any organisation where the potentially affected devices have been transferred. (As appropriate)

Please transfer this notice to other organisations on which this action has an impact. (As appropriate)

Please maintain awareness on this notice and resulting action for an appropriate period to ensure effectiveness of the corrective action.

Please report all device-related incidents to the manufacturer, distributor or local representative, and the national Competent Authority if appropriate, as this provides important feedback.

Field Safety Notice: FSN-2023-09-27

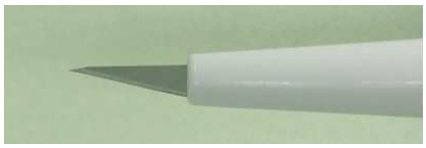
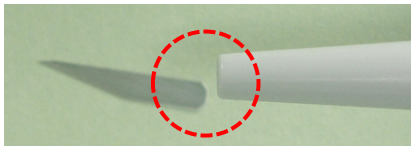
2. Reason for Field Safety Corrective Action (FSCA)

2. 1. Description of the Product Problem

The manufacturer found out that the plastic handle of the product changes over time for some reason, resulting in weakening of the fixing strength which can cause the blade to fall out of the handle.

Normal	Defective
	




2. 2. Hazard giving rise to the FSCA

The product problem may cause an injury or harm to the patient or user.
It may also lead to the interruption or delay of surgical procedures.

2. 3. Probability of Problem arising

Internal tests on aged goods have shown that the probability of the defect occurring increases after approx. 6 months.

2. 4. Predicted Risk to Patient/Users

The possibility of serious health hazard to the patient/user is very low because the device is used in a medical institution under the supervision of health care professional and the defect is either noticed before the procedure or, due to the sharpness of the blade and the very low cutting resistance, the procedure can be performed even if the blade is loose.

2. 5. Background on Issue

Feather came aware of the defect by customer complaints. To date, there have been no reports of incidents associated with the defect. The manufacturer has initiated a root cause analysis for the product defect. Since the defect occurred after the changeover of the production process in 2022, it could be isolated to the affected batches.
