## **Summary of Product Characteristics**

#### 1 NAME OF THE VETERINARY MEDICINAL PRODUCT

Drontal Plus XL Flavour Tablets for Dogs

#### **2 QUALITATIVE AND QUANTITATIVE COMPOSITION**

Each tablet contains: mg per tablet

Febantel 525.0 Pyrantel embonate 504.0 Praziquantel 175.0

**Excipients:** 

Artificial beef flavour irradiated 408.0

For the full list of excipients, see section 6.1

#### **3 PHARMACEUTICAL FORM**

Tablet.

Pale brown to brown oval shaped divisible tablet scored on both sides.

#### **4 CLINICAL PARTICULARS**

#### **4.1 Target Species**

Dogs.

#### 4.2 Indications for use, specifying the target species

For the control of the following roundworms and tapeworms in adult dogs:

Ascarids: Toxocara canis, Toxascaris leonina (adult and late immature forms).

Hookworms: Uncinaria stenocephala, Ancylostoma caninum (adults)

Whipworms: Trichuris vulpis (adults)

Tapeworms: Echinococcus spp. Taenia spp. and Dipylidium caninum (adult and immature forms).

#### 4.3 Contraindications

Do not use simultaneously with piperazine compounds.

#### 4.4 Special warnings for each target species

Fleas serve as intermediate hosts for one common type of tapeworm - *Dipylidium caninum*. Tapeworm infestation is certain to re-occur unless control of intermediate hosts such as fleas, mice etc. is undertaken.

Since it contains praziquantel, the product is effective against *Echinococcus multilocularis*, which does not occur in the UK or Ireland but is becoming more common in some European countries. As a precautionary measure to prevent establishment of *E. multilocularis* in the UK and Ireland, it is recommended that all dogs entering the country be treated with praziquantel.

#### 4.5 Special precautions for use

### **Special precautions for use in animals**

Any part-used tablets should be discarded.

Do not exceed the stated dose when treating pregnant bitches.

16 October 2020 CRN009Z8V Page 1 of 4

#### Special precautions to be taken by the person administering the medicinal product to animals

In case of accidental ingestion, seek medical advice and show the package leaflet to the physician.

In the interests of good hygiene, persons administering the tablet directly to a dog or by adding it to the dog's food, should wash their hands afterwards.

#### 4.6 Adverse reactions (frequency and seriousness)

In very rare cases slight and transient digestive tract disorders such as vomiting and/or diarrhoea may occur. In individual cases these signs can be accompanied by nonspecific signs such as lethargy, anorexia or hyperactivity.

#### 4.7 Use during pregnancy, lactation or lay

Consult a veterinary surgeon before treating pregnant animals for roundworms.

Drontal Plus XL Flavour Tablets may be used during lactation (see Section 4.9 below).

#### 4.8 Interaction with other medicinal products and other forms of interactions

Do not use simultaneously with piperazine compounds. Concurrent use with other cholinergic compounds is not recommended.

#### 4.9 Amounts to be administered and administration route

#### Dosage

The recommended dose rates are: 15 mg/kg bodyweight febantel, 14.4 mg/kg pyrantel and 5 mg/kg praziquantel. This is equivalent to 1 tablet per 35 kg bodyweight as follows:

Dosage are as follows:

Body weight (kg)	Tablet quantity
17.5	1/2
17.5	1
>35-52.5	1 <sup>1</sup> / <sub>2</sub>
>52.5-70	2

Drontal Plus Flavour tablets should be used to achieve accurate dosing in dogs weighing less than 17.5 kg. The dose is equivalent to 1 tablet per 10 kg

Administration and duration of treatment

Oral administration: the tablet(s) can be given directly to the dog or disguised in food. No starvation is needed before or after treatment.

For routine treatment a single dose is recommended.

For the control of Toxocara, nursing bitches should be dosed 2 weeks after giving birth and every 2 weeks until weaning.

For routine control adult dogs should be treated every 3 months. In the event of a heavy roundworm infestation, a repeat dose should be given after 14 days.

#### 4.10 Overdose (symptoms, emergency procedures, antidotes), if necessary

16 October 2020 CRN009Z8V Page 2 of 4

#### **Health Products Regulatory Authority**

Drontal Plus XL Flavour Tablets are well tolerated in dogs. In safety studies doses of 5 x or greater gave rise to occasional vomiting.

#### 4.11 Withdrawal period(s)

Not applicable.

#### **5 PHARMACOLOGICAL or IMMUNOLOGICAL PROPERTIES**

Pharmacotherapeutic Group: Anthelmintics, tetrahydropyrimidine

ATC VetCode: QP52AF30

The product contains anthelmintics active against roundworms and tapeworms. The product contains three active substances:

- 1) Febantel, a pro-benzimidazole, chemical name.
- 2) Pyrantel embonate (pamoate), a tetrahydropyrimidine derivative, and
- 3) Praziquantel, a partially hydrogenated pyrazino-isoquinoline derivative.

#### 5.1 Pharmacodynamic properties

In this fixed combination product pyrantel and febantel act synergistically against all relevant nematodes (ascarids, hookworms and whipworms) in dogs. In particular, the activity spectrum covers *Toxocara canis, Toxascaris leonina, Uncinaria stenocephala, Ancylostoma caninum* and *Trichuris vulpis*.

The spectrum of activity of praziquantel covers all important cestode species in dogs, in particular all *Taenia* spp, *Dipylidium* caninum, *Echinococcus granulosus and Echinococcus multilocularis*. Praziquantel acts against adult and immature forms of these parasites.

Praziquantel is very rapidly absorbed and distributed throughout the parasite. Both *in vivo* and *in vitro* studies have shown that praziquantel causes severe damage to the parasite integument, resulting in contraction and paralysis. There is an almost instantaneous tetanic contraction of the parasite musculature and a rapid vacuolisation of the syncytial tegument. This rapid contraction has been explained by changes in divalent cation fluxes, especially calcium.

Pyrantel acts as a cholinergic agonist. Its mode of action is to stimulate nicotinic cholinergic receptors of the parasite, induce spastic paralysis and thereby allow removal from the gastro-intestinal (GI) system by peristalsis.

Within the mammalian system febantel undergoes ring closure forming fenbendazole and oxfendazole. It is these chemical entities which exert the anthelmintic effect by inhibition of tubulin polymerisation. Formation of microtubules is thereby prevented, resulting in disruption to structures vital to the normal functioning of the helminth. Glucose uptake, in particular, is affected, leading to a depletion in cell ATP. The parasite dies upon exhaustion of its energy reserves, which occurs 2-3 days later.

#### 5.2 Pharmacokinetic particulars

No data available.

#### **6 PHARMACEUTICAL PARTICULARS**

#### 6.1 List of excipients

Artificial beef flavour irradiated Maize starch Lactose monohydrate Microcrystalline cellulose Povidone K25 Magnesium stearate Sodium laurilsulfate Silica colloidal anhydrous

16 October 2020 CRN009Z8V Page 3 of 4

#### 6.2 Major incompatibilities

None known.

#### 6.3 Shelf-life

Shelf-life of the veterinary medicinal product as packaged for sale: 3 years.

#### 6.4 Special precautions for storage

Do not store above 25°C. Any part used tablets should be discarded.

#### 6.5 Nature and composition of immediate packaging

Container material: PCTFE/PVC-aluminium foil strip

Container colour: White

Container sizes: Cartons containing 2, 8, 48 and 96 tablets

Not all pack sizes may be marketed.

# 6.6 Special precautions for the disposal of unused veterinary medicinal products or waste materials derived from the use of such products

Any unused veterinary medicinal product or waste materials derived from such veterinary medicinal product should be disposed of in accordance with local requirements

#### **7 MARKETING AUTHORISATION HOLDER**

Vetoquinol SA Magny-Vernois 70200 Lure France

#### 8 MARKETING AUTHORISATION NUMBER(S)

VPA10521/009/001

#### 9 DATE OF FIRST AUTHORISATION/RENEWAL OF THE AUTHORISATION

Date of first authorisation: 20 March 2009 Date of last renewal: 21 February 2014

#### 10 DATE OF REVISION OF THE TEXT

October 2020
