

PATIENT'S COUPON IN CASE OF ADVERSE DRUG REACTIONS

Dear Patient

You have undergone leukocyte scintigraphy on // , for which a diagnostic product named Scintimun was injected into your veins. However, in the unlikely event of any undesirable effect that may very rarely occur several days or weeks following the injection, please contact your doctor for medical advice and inform the nuclear medical centre. Please be aware that the following reactions have been observed rarely (less than 1 in 10,000 patients) after exposure to Scintimun: allergic reactions, fever, joint pain, swollen lymph nodes in the neck / armpits / groin, skin rashes, abnormal swelling / pain / itching at the venous injection site.

You can contact the nuclear medical centre where you underwent the imaging procedure, at:

Sincerely,
