PACKAGE LEAFLET: INFORMATION FOR THE USER

# Aminophylline Hydrate 25mg/ml Solution for injection

**Read all of this leaflet carefully before you start using this medicine because it contains important information for you.**

Keep this leaflet. You may need to read it again.

If you have any further questions, ask your doctor, pharmacist or nurse.

If you get any side effects, talk to your doctor or pharmacist or nurse. This includes any possible side effects not listed in this leaflet. See section 4.

The name of your medicine is Aminophylline Hydrate 25mg/ml Solution for injection. It will be referred to as Aminophylline Injection for ease here after.

**What is in this leaflet**

1. What Aminophylline Injection is and what it is used for
2. What you need to know before you are given Aminophylline Injection
3. How Aminophylline Injection is given to you
4. Possible side effects
5. How to store Aminophylline Injection
6. Contents of the pack and other information

**1. WHAT AMINOPHYLLINE INJECTION IS AND WHAT IT IS USED FOR**

Aminophylline belongs to a group of medicines called xanthines. It expands the air passages of the lungs, which helps relieve chest tightness and wheezing (bronchospasm).

This medicine may be used to relieve difficulty in breathing due to asthma and long term obstruction to the flow of air in the lungs.

**2. WHAT YOU NEED TO KNOW BEFORE YOU ARE GIVEN AMINOPHYLLINE INJECTION**

You should not be given Aminophylline Injection if:

- you are allergic to Aminophylline hydrate and Xanthine containing medicines or any of the other ingredients of this medicine (listed in section 6).
- you are sensitive or allergic to ethylenediamine, theophylline, caffeine or theobromine
- you have porphyria (a condition that affects your blood).

Speak to your doctor if this applies to you before you are given Aminophylline Injection.

**Take special care and tell your doctor if:**

- you are elderly
- you have a heart problem
- you have a problem with your kidney or liver
- you are a smoker
- you have ever had a peptic ulcer
- you have ever suffered from seizures/fits (e.g. epilepsy)
- you have an overactive thyroid
- you have pressure in the eyes (known as glaucoma)
- you are a diabetic
- you have high blood pressure
- you have low blood oxygen
- you suffer from poor circulation
- you have chronic bronchitis
- you have an alcohol problem
- you are suffering from a viral infection, such as flu or have recently had a flu injection or you have a fever.

The use of Aminophylline IV in children under 1 year of age is not recommended.

Even though some of these may be obvious, tell your doctor if any of these apply to you before you are given Aminophylline injection.

Care should also be taken when this medicine is given to children.

**Other medicines and Aminophylline Injection**

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medicines.

In particular, tell your doctor if you are taking any of the following:

- medicines for heartburn or an ulcer (e.g. cimetidine)
- medicines used for an infection such as antibiotics (e.g. erythromycin, ciprofloxacin, rifampicin, fluoroquinolones)
- medicines for gout (e.g. allopurinol or sulphinpyrazone)
- medicines for worms (e.g. thiabendazole)
- oral contraceptive pills
- medicines such as antidepressants (e.g. fluvoxamine, carbamazepine)
- medicines for fits/epilepsy (e.g. phenytoin, barbiturates)
- medicines, including cough mixtures and decongestants, which contain ephedrine or medicines with similar effects (your pharmacist can advise you)
- medicines known as beta-2 agonist drugs, which are used to relieve asthma or chronic bronchitis (e.g. salbutamol)
- medicines used to increase your blood sugar levels (e.g. glucagon)
- Other medicines from the same group as Aminophylline (known as xanthines), e.g. theophylline
- medicines to treat tuberculosis (e.g. isoniazid, rifampicin)
- fluconazole (a medicine to treat fungal infections)
- medicines for your heart (e.g. digoxin, propranolol, diltiazem, adenosine, mexiletine, verapamil or propafenone)
- disulfiram (a medicine for an alcohol problem)
- a recent flu vaccination
- zafirlukast (a medicine for asthma)
- methotrexate (used to treat certain cancers)
- antiviral medicines (e.g. ritonavir)
- aminoglutethimide used to treat breast cancer
- lithium (a medicine to regulate your moods)
- benzodiazepines (e.g. diazepam)
- ketamine or halothane (medicines used for anaesthesia)
- muscle relaxants (e.g. pancuronium)
- doxapram (medicine to stimulate breathing)
- herbal medicines containing St. John's wort
- Regadenoson- a medicine used in diagnosis of heart condition.

**Pregnancy and breast-feeding:**

If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor or pharmacist for advice before taking this medicine. As with

other drugs, aminophylline should only be used during pregnancy and breast-feeding if your doctor considers it essential.  
Aminophylline passes into the breast milk hence it should not be given if you are breast-feeding.  
Ask your doctor or pharmacist for advice before taking any medicine.  
**Driving and using machines:**  
Aminophylline should not affect your ability to drive or use machinery.

3. HOW AMINOPHYLLINE INJECTION IS GIVEN TO YOU

Aminophylline is usually given by injecting slowly into the vein. It may also be given slowly by a drip into a vein.  
After you are given the initial dose, you may need further doses. Your doctor will decide on the dose to be given.  
Your doctor may want to take blood samples to make sure that you have the correct blood levels of this medicine.  
**If you are given more Aminophylline Injection than you should have:**  
As aminophylline is administered by a healthcare professional it is unlikely that you will be given too much. If you are at all concerned about the dose, speak to your doctor.  
In this event, you will be treated in the hospital and you will be given the necessary treatment.  
**If you miss a dose of Aminophylline Injection:**  
This is unlikely as the injection is given by a healthcare professional but if you are concerned about missing a dose, speak to your doctor.  
If you have any further questions on the use of this product, ask your doctor or pharmacist.

4. POSSIBLE SIDE EFFECTS

Like all medicines, this medicine can cause side-effects, although not everybody gets them.  
**All medicines can cause allergic reactions although serious allergic reactions are rare. Any sudden wheeziness, difficulty in breathing, swelling of the eyelids, face or lips, rash or itching (especially affecting your whole body) should be reported to a doctor immediately.**  
The following unwanted side effects have been reported for Aminophylline Injection (Frequency-Not known: frequency cannot be estimated from the available data)  
• Feeling sick or being sick, abdominal pain  
• Extreme thirst  
• Stomach bleeding, heartburn and diarrhoea  
• Visual disorders, sleeplessness, headache  
• Anxiety, confusion, restlessness, maniacal behaviour, mental disturbance  
• Increased rate of breathing  
• Spinning sensation  
• Palpitations (a sensation of your heart beating)  
• Fast or irregular heartbeat  
• Pain if injected into a muscle  
• Low blood pressure, elevated body temperature  
• Trembling or shaking, fits  
• Rash, redness and flakiness of the skin.  
If any of the side effects gets serious, or if you notice any side effects not listed in this leaflet, please tell your doctor or pharmacist.

**Reporting of side effects**  
If you get any side effects, talk to your doctor or pharmacist or nurse. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via HPRA Pharmacovigilance  
Earlsfort Terrace  
IRL - Dublin 2

5. HOW TO STORE AMINOPHYLLINE INJECTION

Keep this medicine out of the sight and reach of children.  
Do not use this medicine after the expiry date which is stated on the carton and ampoule label after 'Exp'. The expiry date refers to the last day of that month.  
Keep the ampoule in the outer carton in order to protect from light. Do not store above 25°C.  
For single use only.  
Once the ampoule has been opened it should be used immediately. If only part of the solution is used, discard the remaining solution.  
Do not use this medicine if you notice the ampoule is damaged or if the contents are discoloured or deteriorated.  
Medicines should not be disposed of via wastewater or household waste. Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.
