

- > If you are under dental treatment or will undergo dental surgery (e.g. tooth extractions), inform your doctor and tell your dentist that you are being treated with zoledronic acid.
- > Contact your doctor and dentist immediately if you experience any problems with your mouth or teeth such as loose teeth, pain or swelling, or non-healing of sores or discharge, as these could be signs of osteonecrosis of the jaw.

**PLEASE READ THE PACKAGE LEAFLET
THAT COMES WITH YOUR MEDICINE
FOR FURTHER INFORMATION.**

If you get any side effects, talk to your doctor, pharmacist or nurse. By reporting side effects, you can help provide more information on the safety of this medicine. You can report side effects directly via HPRA Pharmacovigilance Website: www.hpra.ie
Side effects could also be reported to Novartis preferably via www.report.novartis.com, or by email to drugsafety.dublin@novartis.com or by calling 01 2080 612.

Date of Preparation: January 2021 | IE107848
HPRA approved February 2021.

PATIENT REMINDER

OSTEONECROSIS OF THE JAW

This reminder card contains important safety information that you need to be aware of before and during treatment with Aclasta® (zoledronic acid).

HPRA Approved February 2021.

Your doctor has recommended that you receive zoledronic acid (Aclasta®) which is used to treat post-menopausal women and adult men with osteoporosis or osteoporosis caused by treatment with steroids, and Paget's disease of the bone in adults.

These diseases involve thinning and weakening of the bones so they may break more easily.

A side effect called osteonecrosis of the jaw (ONJ) (severe bone damage in the jaw) has been reported very rarely in patients receiving zoledronic acid for osteoporosis.

ONJ can also occur after stopping treatment.

It is important to try and prevent ONJ developing as it is a painful condition that can be difficult to treat. In order to reduce the risk of developing ONJ, there are some precautions you should take:

BEFORE STARTING TREATMENT:

Tell your doctor/nurse (health care professional) if you have any problems with your mouth or teeth. Your doctor may ask you to undergo a dental examination if you:

- > were previously treated with another medication being a bisphosphonate
- > are taking medicines called corticosteroids (such as prednisolone or dexamethasone)
- > are a smoker
- > have cancer
- > have not had a dental check up for a long time
- > have problems with your mouth or teeth

WHILE BEING TREATED:

- > You should maintain good oral hygiene, brush your teeth regularly and receive routine dental check-ups. If you wear dentures you should make sure these fit properly.
