

Package leaflet: Information for the user**Water for Injections** solvent for parenteral use

Read all of this leaflet carefully before you start using this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.
- This medicine has been prescribed for you only. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.
- If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

What is in this leaflet

1. What Water for Injections is and what it is used for
2. What you need to know before you use Water for Injections
3. How to use Water for Injections
4. Possible side effects
5. How to store Water for Injections
6. Contents of the pack and other information

1. What Water for Injections is and what it is used for

Sterilised Water for Injections is used to dissolve and dilute other medicines that require mixing with water before they can be given as an injection or an infusion (a drip) into your veins, muscles or other tissues in the body.

2. What you need to know before you use Water for Injections

The following sections contain information that you and your doctor should consider before you use Water for Injections.

Do not use Water for Injections

- as an injection or infusion on its own

Water for Injections must only be used to dissolve or dilute necessary drugs.

You should read the Patient Information Leaflet of your medicine or medicines that are being mixed with Water for Injections. This will tell you whether or not you can receive the solution.

Warnings and precautions

Water for Injections should not be used on its own.

Before you use Water for Injections:

- it should always be mixed with one or more medicines

Before you are given medicines mixed with Water for Injections your doctor will check that:

- the medicines are stable in Water for Injections
- the medicines will not interact with each other

Other medicines and Water for Injections

Please refer to the Patient Information Leaflet of your medicine that is being mixed with Water for Injections. Those medicinal products known to be incompatible with water for injections must not be used.

Pregnancy, breast-feeding, and fertility

Please refer to the Patient Information Leaflet of your medicine that is being mixed with Water for Injections.

Driving and using machines

Water for Injections has no influence on the ability to drive and use machines. Any effects on your ability to drive or use machines will depend on which medicines you are using mixed with Water for Injections.

3. How to use Water for Injections

Always use this medicine exactly as your doctor has told you. Check with your doctor or pharmacist if you are not sure.

Your doctor will decide how much you need and when and how it is to be given. This will depend on which medicine or medicines you need to take with Water for Injections.

Use only if the Water for Injections is clear, colourless, without visible particles and if the container is undamaged.

If you have any further questions on the use of this medicine, ask your doctor or pharmacist.

4. Possible Side Effects

Please refer to the Patient Information Leaflet of your medicine that is being mixed with Water for Injections.

Reporting of side effects

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. You can also report side effects directly to:
