DDAVP®/ Desmopressin Nasal Drops, Solution
Desmopressin acetate

What is in this leaflet:
1. What DDAVP/Desmopressin Nasal Drops, Solution is and what it is used for
2. What you need to know before you use DDAVP/Desmopressin Nasal Drops, Solution
3. How to use DDAVP/Desmopressin Nasal Drops, Solution
4. Possible side effects
5. How to store DDAVP/Desmopressin Nasal Drops, Solution
6. Contents of the pack and other information

1. What DDAVP/Desmopressin Nasal Drops, Solution is and what it is used for

DDAVP/Desmopressin Nasal Drops, Solution is for nasal use only. It contains desmopressin acetate, an antidiuretic (reduces urine production).

2. What you need to know before you use DDAVP/Desmopressin Nasal Drops, Solution

Do not use DDAVP/Desmopressin Nasal Drops, Solution:

- if you are allergic to desmopressin or any of the other ingredients of this medicine (listed in section 6)
- if you are taking diuretics (water tablets)
- if you drink unusually large quantities of fluids, including alcohol
- if you have known hyponatraemia (serum sodium levels below normal range)
- If you have syndrome of inappropriate secretion of anti-diuretic hormone, a hormone regulating urine production (SIADH)

Please consult your doctor before you use DDAVP/Desmopressin Nasal Drops, Solution:

- Use with caution in very young and older patients.
- Renal function testing in children below 1 year old should only be performed under carefully supervised conditions in hospital.

If any of these apply to you, or if you are not sure, contact your doctor before taking DDAVP/Desmopressin Nasal Drops, Solution.

Other medicines and DDAVP/Desmopressin Nasal Drops, Solution

Tell your doctor or pharmacist if you are using, have recently used or might use any other medicines.

Please inform your doctor or pharmacist:

- if you are on medication for depression, epilepsy or type II diabetes
- you are taking a medicine for pain or inflammation containing non-steroidal anti-inflammatory drugs (also known as NSAIIDs) e.g. indomethacin or ibuprofen

DDAVP/Desmopressin Nasal Drops, Solution with food and drink

- You should avoid drinking large amounts of fluid while you are being treated with DDAVP/Desmopressin Nasal Drops, Solution as this could lead to a build up of water which dilutes the salt in the body. This is a serious problem and may lead to convulsions. When used for diagnostic purposes (renal function test): limit fluid intake to no more than 600 ml from 1 hour before until 8 hours after the dose.
- Avoid swallowing water when swimming to prevent a build-up of water in the body.

Pregnancy, breastfeeding and fertility

If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor or pharmacist for advice before taking this medicine.

3. How to use DDAVP/Desmopressin Nasal Drop, Solution

Always use this medicine exactly as your doctor or pharmacist has told you. Check with your doctor or pharmacist if you are not sure.

The usual doses are:

Diagnosis of diabetes insipidus (adults and children):

- Your doctor will prescribe a dose of 0.2 ml [20 micrograms].

Treatment of diabetes insipidus:

- Your doctor will prescribe the dose most suitable for you.

The most commonly used doses are:

Adults: 0.1 ml to 0.2 ml once or twice daily (5 to 20 micrograms once or twice daily).

Children: 0.06 ml to 0.1 ml once or twice daily (6 to 10 micrograms once or twice daily). A lower dose may be required for infants.

Renal function test:

To check if the kidneys are functioning properly, your doctor will prescribe the following single dose:

Adults: 0.4 ml (40 micrograms)

Children (> 1 year): 0.2 ml (20 micrograms)

Infants (< 1 year): 0.1 ml (10 micrograms)

PATIENT INSTRUCTIONS

1. Pull plastic tag on neck of bottle

2. Break security seal and remove plastic cap.
3. Twist off the small seal from the dropper. You can use the same seal reversed to prevent any subsequent leaks.

4. One end of the tube is marked with measurements - take this end of the tube in one hand. With your other hand, place your fingers around the dropper of the bottle (see diagram below). Insert the top of the dropper in a downward position into the end of the tube marked with an arrow and squeeze the dropper until the solution has reached your desired measurement. The tube has 5 dosing marks: 0.025 ml, 0.050 ml, 0.100 ml, 0.150 ml and 0.200 ml. If you have difficulty filling the tube, you can use a syringe to help with filling the tube.

5. Hold the tube with your fingers approximately 3/4 inch from the end and insert it into the nostril until the tips of the fingers reach the nostril (see diagram).

6. Put the other end of the tube into your mouth. Hold your breath, tilt back your head and then blow with a short strong puff through the tube so that the solution reaches into your nose.

7. If this product is for a child the dose should be given or supervised by an adult.

8. After use, place the seal on the dropper and close the bottle with the plastic cap. Wash the tube in water and shake thoroughly, until no more water is left. The tube can then be used for the next application.

If you use more DDAVP/Desmopressin Nasal Drops, Solution than you should:

If you have used more DDAVP/Desmopressin Nasal Drops, Solution than you should, talk to your doctor or pharmacist immediately.

If you forget to use DDAVP/Desmopressin Nasal Drops, Solution:

Do not take a double dose to make up for a forgotten dose.

If you are a patient with diabetes insipidus, please consult your doctor or pharmacist for advice.

If you have any further questions on the use of this medicine, ask your doctor or pharmacist.

4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everybody gets them.

STOP USING DDAVP/Desmopressin Nasal Drops, Solution if you experience:

- allergic reactions including itching, skin rashes, swelling of the face, lips or throat, difficulty in breathing, wheezing, chest tightness or coughing
- unusually bad or prolonged headache, confusion, unexplained weight gain, ankle swelling, nausea or vomiting (signs and symptoms of water retention which can occur if too much fluid is consumed)

Low levels of sodium in your blood can lead to fits. This is more likely to happen if you drink large amounts of fluid while receiving this medication.

If you experience any of the above side effects, you should contact your doctor or go to the nearest casualty department immediatly.
