4. Possible side effects

• If you get any side effects, talk to your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. See section 4.
• If you have any further questions, ask your doctor, pharmacist or nurse. This includes any possible side effects not listed in this leaflet. See section 4.

2. What you need to know before you use Urokinase

• Your doctor will not give you Urokinase if you are allergic to any ingredient of this medicine (listed in section 6).
• Your doctor will not give you Urokinase if you are suffering from severe bleeding.
• Your doctor will not give you Urokinase if you have gastrointestinal disorders, e.g.
• Your doctor will not give you Urokinase if you have had a recent injury including cardiopulmonary resuscitation, operation with opening of the chest or on the head or spine (within 2 months).
• Your doctor will not give you Urokinase if you have disorders of the lung (e.g. tuberculosis).
• Your doctor will not give you Urokinase if you have had recent operation until the wound has healed, e.g. a recent dental extraction, an injection into the muscles or joints, an examination of tissue that has been taken during surgery or biopsy of the placenta.
• Your doctor will not give you Urokinase if you have disorders in the heart, e.g. mitral stenosis with atrial fibrillation.
• Your doctor will not give you Urokinase if you have suspected blood clot in the left ventricle of the heart (e.g. atrial myxoma with atrial fibrillation).
• Your doctor will not give you Urokinase if you have severe, uncontrolled high blood pressure.
• Your doctor will not give you Urokinase if you have dilation of a blood vessel in the brain (e.g. aneurysm).
• Your doctor will not give you Urokinase if you have a tumour in the brain.
• Your doctor will not give you Urokinase if you have had recent operation until the wound has healed, e.g. a recent dental extraction, an injection into the muscles or joints, an examination of tissue that has been taken during surgery or biopsy of the placenta.
• Your doctor will not give you Urokinase if you have a tumour in the brain.
• Your doctor will not give you Urokinase if you have had recent injury including cardiopulmonary resuscitation, operation with opening of the chest or on the head or spine (within 2 months).
• Your doctor will not give you Urokinase if you have disorders of the lung (e.g. tuberculosis).
• Your doctor will not give you Urokinase if you have had recent operation until the wound has healed, e.g. a recent dental extraction, an injection into the muscles or joints, an examination of tissue that has been taken during surgery or biopsy of the placenta.
• Your doctor will not give you Urokinase if you have disorders in the heart, e.g. mitral stenosis with atrial fibrillation.
• Your doctor will not give you Urokinase if you have suspected blood clot in the left ventricle of the heart (e.g. atrial myxoma with atrial fibrillation).

The use of this medicine is not recommended in patients with atrial fibrillation or other conditions in which there is a risk of bleeding in the brain because of the risk of bleeding into the affected areas of the brain.

The use of this medicine is not recommended in patients with atrial fibrillation or other conditions in which there is a risk of bleeding in the brain because of the risk of bleeding into the affected areas of the brain.

3. How to use Urokinase

Please refer to page 13 for details on administration of this medicine.

Severe pulmonary embolism

Urokinase should not be used in women who are pregnant or immediately after giving birth. The possible side effects of this medicine make it undesirable for use during pregnancy or immediately after giving birth.

• Patients over 65 years

The use of this medicine is not recommended if you have a tumour in the brain.

If you use more Urokinase than you should

Driving and using machines

Driving and using machines is not recommended during treatment with this medicine.

The use of this medicine is not recommended in patients with atrial fibrillation or other conditions in which there is a risk of bleeding in the brain because of the risk of bleeding into the affected areas of the brain.

Driving and using machines is not recommended during treatment with this medicine.

The use of this medicine is not recommended in patients with atrial fibrillation or other conditions in which there is a risk of bleeding in the brain because of the risk of bleeding into the affected areas of the brain.

Urokinase medac · 82100-VBIL · AA · 09.18 · Pharma-Code: 276 (Dummy)
4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everyone gets them. The side effects of urokinase are:

• Bleeding

The most common side effect of urokinase is excessive bleeding. Other adverse effects include:

• Blood clots in the blood vessels
• Bleeding of retroperitoneum, peritoneum, stomach, bowel
• Bleeding at injection sites or from wounds, bruising
• Nose bleed, bleeding gums
• Bleeding inside the head or liver
• Bleeding in muscle or organs other than those referred to above
• Bleeding in the urinary or reproduction system, or inside the head
• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

Other side effects include:

• Very common (may affect more than 1 in 10 people):

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding of retroperitoneum, peritoneum, stomach, bowel
• Bleeding at injection sites or from wounds, bruising
• Nose bleed, bleeding gums
• Bleeding inside the head or liver
• Bleeding in muscle or organs other than those referred to above
• Bleeding in the urinary or reproduction system, or inside the head
• Life-threatening allergic reaction

• Bleeding of organs of the urinary or reproduction system, inside the head

• Very common (may affect more than 1 in 10 people):

• Bleeding

Other adverse effects may include:

• Uncommon (may affect up to 1 in 100 people):

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Uncommon (may affect up to 1 in 100 people):

• Life-threatening bleeding complications of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills

• Blood clots in the blood vessels

• Bleeding

• Bleeding of organs of the urinary or reproduction system, inside the head

• Life-threatening allergic reaction

• Allergic reaction with skin reactions (flush, urticaria), fever, chills
